

Data Services

OAKLAND | DATA SERVICES are a set of optional modules that extend the capabilities of the OAKLAND System. OAKLAND Data Service Modules provide integration, web services, and access to your data.

FarmerData

The FarmerData module is designed to give your customers access to their grain and accounting information online.

Your customer can view their balance due and individual ticket detail, and view their prepaid and unpaid product bookings balances. FarmerData is available to your customers anywhere they have Internet access, through FarmerData.com

Features

- Receive Online Payments from your Customers
- Save Postage with Online Statements
- Easily Export Data to Microsoft Excel
- Manage User Accounts online through the Site Administrator

Long & Short Commodity Gauges

The OAKLAND Long & Short Gauges monitor the real-time, long & short position of any commodity in the Oakland System. The Oakland Long & Short Gauges provide you with a real-time, convenient way to monitor your inventory.

Features

- Monitor Positions for Multiple Commodities
- Small Desktop Application for Quick & Easy access to Inventory Position
- Real-time inventory monitoring
- Set alerts to notify you of changing inventory levels
