

Kerio and Thunderbird

Open Thunderbird, and select “Tools” from the Menu Bar, then “Account Settings”

Click “Account Actions”, and select “Add Account”

Enter your name, full email address, and password, and click “Continue”

This will attempt to Auto-Discover your settings. Press “Stop”.

Important: Click “Edit”.

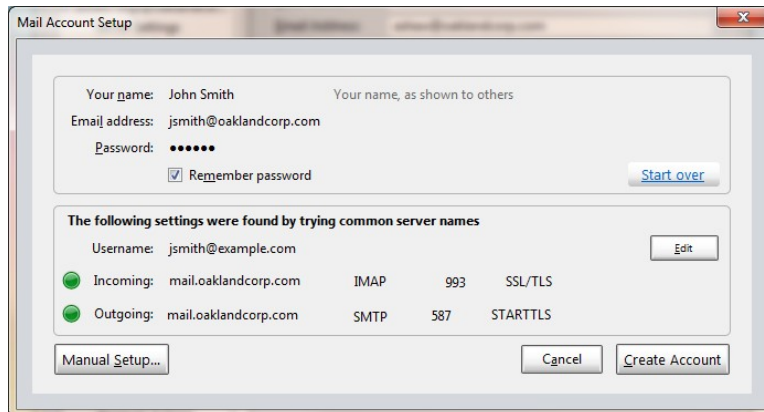

Change the following settings.

Enter username as full email address.

Incoming:	mail.oaklandcorp.com	IMAP	993	SSL/TLS
Outgoing:	mail.oaklandcorp.com	SMTP	587	STARTTLS

Click Re-Test Configuration.

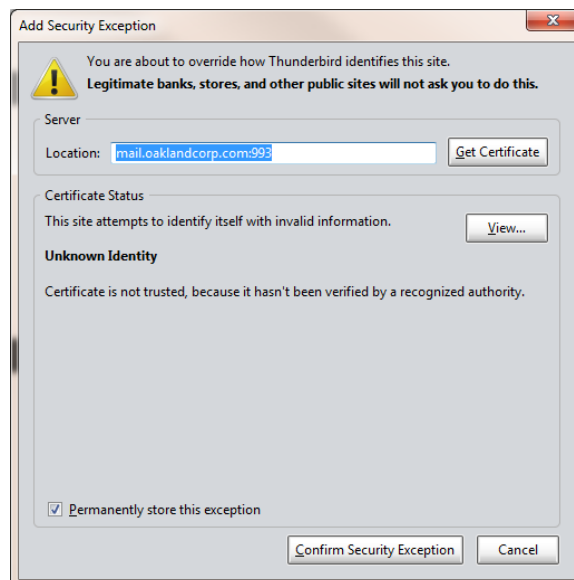

After awhile, it should return with a green dot next to both Incoming and Outgoing. (Figure 1)

Click Create Account.

Press Okay and Save.

Attempt to check your e-mail, and accept the SSL Certificate. (Figure 2)

Attempt to send an email to yourself, accept the SSL Certificate (Figure 3), and press OK to the SMTP error. (Figure 4) Attempt to resend the message. This error only occurs the first time you send an email after configuring a new account.
